[California Distributed Generation Statistics \(DGStats\)](#)

California Distributed Generation Statistics (DGStats) is the California Public Utilities Commission's official public reporting site of all distributed generation projects that are on a customer's site or property in California's investor-owned utility service territories.

Relevant files

We utilised two primary datasets from the DGStats website:

1. [Interconnected Project Sites Data Set](#)

The Interconnected Project Sites Data Set contains all interconnected (excluding pending and decommissioned) projects with one row per interconnection address/project site. This dataset includes only interconnected solar PV Net Energy Metering (NEM) projects. It reflects the current "state of the world" by detailing the total number of solar projects and the total megawatts (MW) installed in specific ZIP codes.

2. [Low Income Solar PV Data](#)

The Low-Income Solar PV Data Set contains all applications received through the Single-family Affordable Solar Homes (SASH) programs, the Multi-family Affordable Solar Housing (MASH) programs and the Disadvantaged Communities - Single-family Affordable Solar Homes (DAC-SASH) program.
